SWEET PEAS

By test, our collection of Spencer Sweet Peas (Summer Flowering) contains the best variety in each color classification. These newer varieties insure more plant vigor, more and larger blooms, and a better collection of colors. If given normal care in growing, long, stiff stems will produce four nicely waved and frilled blooms. Sweet Peas should be sown as early as possible in the spring. Sow in furrow 4 to 6 inches deep, covering seed 1 inch, drawing soil to row, filling furrow as the plants grow.

GIANT SPENCER VARIETIES

PINK

LAWN GRASS SEEDS

SEEDS FOR EVERY LAWN REQUIREMENT

50 Pounds at 100 lb. Rate

ABOUT LAWNS

A good lawn is, without doubt, one of the important features of the home grounds or of any landscape design. It should be remembered when considering a new lawn that the cost of the seed is only a very small part of the actual investment. The labor cost is the greatest. It is thus no economy to save a few cents by buying seed of a questionable quality, only to realize the added expense in years to come of re-patching and doing the lawn over and over again. We take pleasure in recommending our grades of Kentucky Blue Grass, which are the best obtainable, and also our mixtures for special purposes as listed below.

CHAMPION LAWN

A blend of quick growing grasses plus Kentucky Blue and Clover. Produces a rugged turf in good or poor soils. Sow where the lawn will get the hardest usage. Excellent for terraces. Sow 1 lb. to 100 square feet (10x10 ft.).

MERION B-27 BLUE GRASS

This is a new strain of Blue Grass that started from a single plug of turf at the Merion Golf Club in Pennsylvania. It makes a dense, dark green turf, spreads rapidly and crowds out weeds because of its vigorous growth. In tests, Merion Blue Grass shows a great advantage over regular Blue Grass in the control of Crab Grass, due to its husky, well-rooted plants, free of disease, with more drought tolerance that fights off Crab Grass plant invasion. Use only one pound for 400 to 650 square feet.

HOLE-IN-ONE

BULB AND PLANT SETTER

This handy tool makes the type of hole best suited for bulbs. They do best when planted with their roots resting on a firm flat base free from air-pockets. Merely cut the tool into the soil, remove it with a slight twisting motion and the soil comes with it, leaving a clean, flat-bottomed hole in which plants or bulbs may be set.

Each \$1.00.

Knife, Spade and Screwdriver

are all you need to put this system in the ground —

You assemble your system on top of the ground, using knife and screwdriver. Then you simply slit the sod with a spade, and pull back sod enough to allow pipe to be pushed down in opening. Sod can then be pressed back in place, and your Gates Underground Sprinkler System is installed — without damage to the lawn.

Payments as low as \$5 a month

If you are still too tired? Call Colorado Seed Co., KEystone 4-1351 for a free estimate of a complete installation.

Polyethylene is an amazing new, tough yet flexible pipe material now widely used in industry. It won't become brittle or crack even at 40° below zero; it is absolutely unaffected by acids and alkalis in soil; will never rust or rot... nor accumulate deposits of sediment. A wonderful gift to us from modern science.
